Risk Alert for North Korea (2/2020)

Declan Selleck
15 April, 2020

Risk Alert issued for North Korea:

North Korea has fired several missiles towards the Sea of Japan, according to South Korea's military. No-one seems to know for sure if they were ballistic missiles (the ones that go up into space and then back down again, spraying debris all over international airways) or cruise missiles (the ones that fly at low altitudes making them hard to detect). Either way, they're still launching missiles, and they're still not providing any warning by Notam, and that = risk. Several countries have warnings in place for North Korean airspace, including the US which prohibits flights across the entire the ZKKP/Pyongyang FIR, including the oceanic part over the Sea of Japan.
