

# Elevated Warning for Kenyan Airspace

Declan Selleck  
12 August, 2016

We have changed our guidance for Kenya from **Level 3 - Caution**; to **Level 2 - Assessed Risk**. Flight Service Bureau publishes a regularly updated guide to **Unsafe Airspace** for Airlines and Aircraft Operators.

Until today, the only Airspace warning for Kenya had been the FAA KCIZ NOTAM 05/2016, but a NOTAM issued today by the UK Department for Transport has now added Kenya to the list of countries with guidance. Coupled with Al Shabaab airstrikes by the Kenyan Air Force 2 days ago, and increasing numbers of attacks by the group, the situation may be growing increasingly unstable.

**We recommend all operators to monitor events closely.**

Updated guidance material **August 12th**:
