

How to survive a French ATC strike

David Mumford

16 November, 2023

**Update 10 Oct 2023**

- **There will be an ATC strike on Nov 20. It runs from 17z Nov 19 - 05z Nov 21.**
- **Like previous French ATC strikes, expect delays for overflights and for flights to French airports. The airlines have been requested to reduce flights to LFPO/Paris Orly, LFBO/Toulouse, LFML/Marseille, and LFBD/Bordeaux - so we might expect things to be worse here than anywhere else, but in truth all airports in France are grim on strike days.**
- **A strike on Sep 15 was called off, with the union reportedly agreeing not to schedule any more ATC strikes during major sporting events or the Paris 2024 Summer Olympics. However, ATC workers may still join general strikes (which seems to be what is happening on Nov 20!)**

How to survive a French ATC strike

Each French ATC strike is different, but there are some things that are pretty much the same every time. **Here is what you need to know, in order to survive!**

What happens?

There's a normal pattern to French ATC strikes – controllers who are unhappy about a range of issues (mainly salaries and labour reforms) announce they plan to go on strike, Eurocontrol puts a plan in place to mitigate the disruption as best as possible, and airlines start cancelling flights – sometimes voluntarily, other times under the instruction to reduce their schedules.

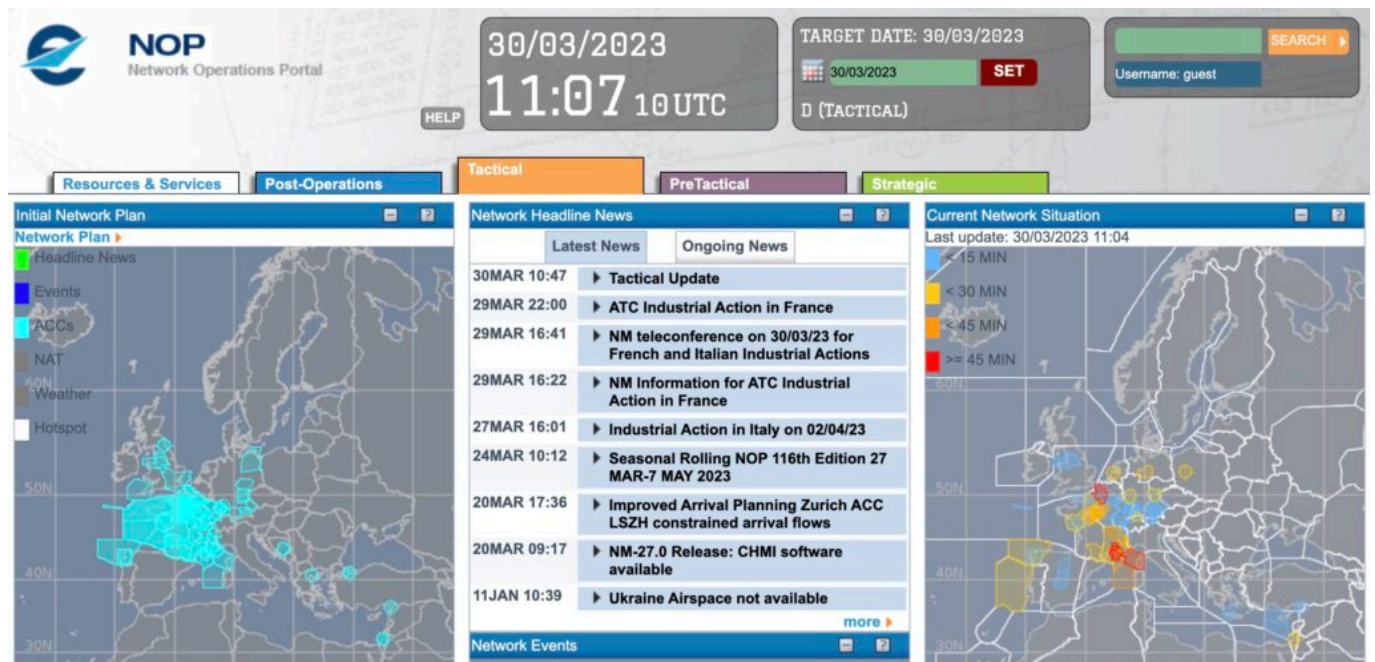

So let's break that down a bit...

How do strikes get announced?

On the Notams, to start with. And the Notams that get published prior to these strikes are often fairly similar, and tend to be a bit vague. That's because they never know exactly how many staff will go on strike until the day itself, when they look around the control room and count the number of empty seats.

Then what happens?

Eurocontrol tell us about the Notams - in the "Network Headline News" section at the top of the NOP website.

strike fest

Then they start figuring out **what they think the impact will be**. They normally host a teleconference or two, where a bunch of their ATC personnel jump on a call with airlines and other interested parties to discuss what they think will happen.

Then they publish a **"Mitigation Plan"**. This tells you:

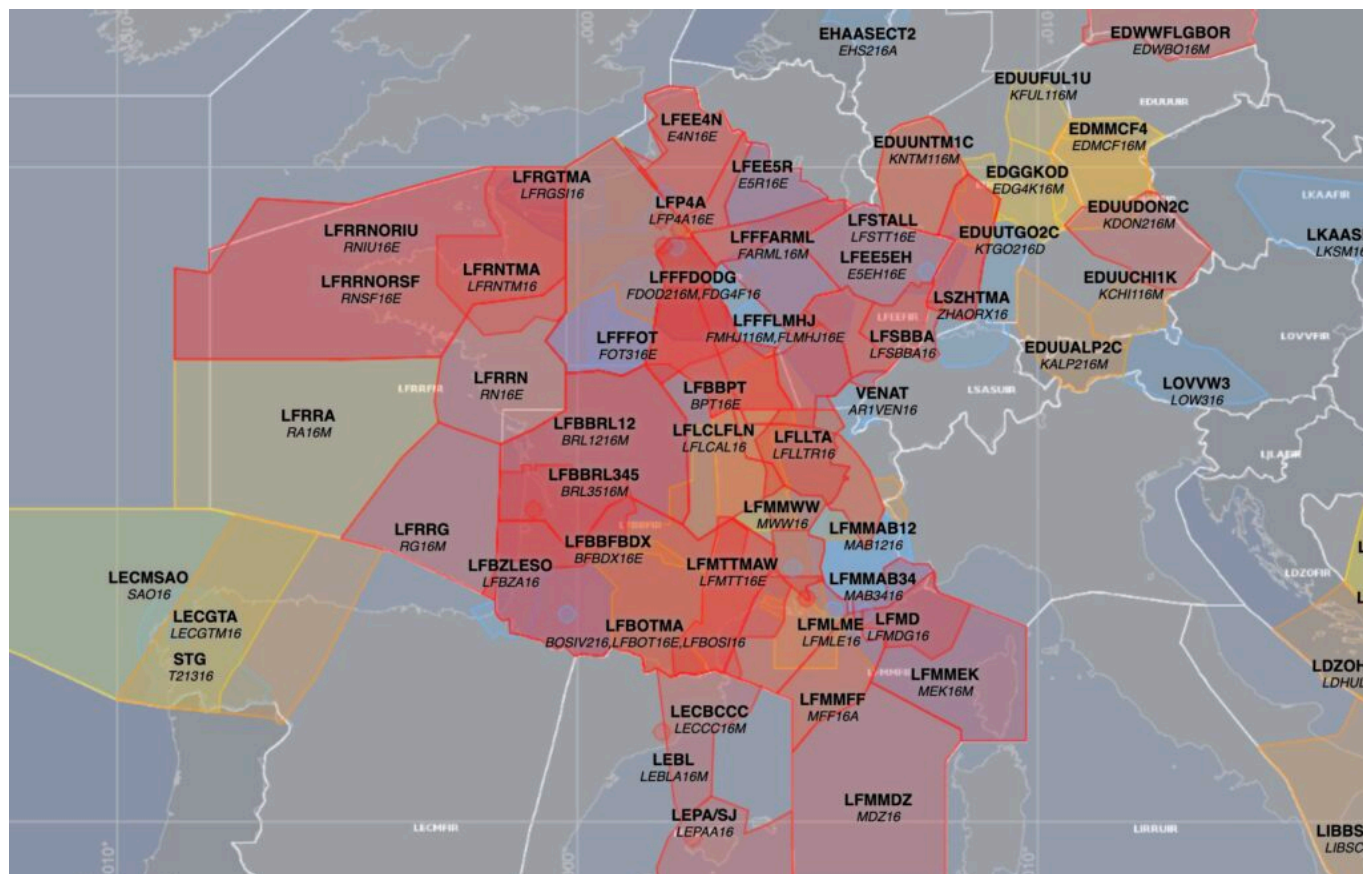

- Their best guess of how bad the strike is going to be
- What to expect for flights to France
- How best to avoid French airspace.

The big day arrives... it's strike time!

Smaller airports - These tend to have the harshest restrictions applied, often with periods where no ATS services are provided at all.

Bigger airports - During the really big strikes, the larger airports can get hit pretty hard too, and when Notams start getting published saying "MINIMUM SERVICE", that's when you know that things are getting serious - as that basically means that only 50% of FPLs are being accepted (the absolute minimum allowed under French law, regardless of whether or not a strike is taking place).

French ATC strikes may also impact French overseas territories – so keen an eye on the Notams at the likes of NTAA/Tahiti, SOCA/Cayenne, TFFF/Martinique, TFFR/Pointe a Pitre, FMEE/La Réunion, and FMCZ/Mayotte airports as well as those in France.

For real-time updates of any airspace issues once the strike has started, keep an eye on the **“Tactical Update”** section of the NOP, as well as this **French ATC webpage**: <https://cdm.dsna.fr/>

Routing around French airspace

Here's what it normally says, every time:

- **Tango Routes** are subject to higher than normal demand when strikes are on. Flights intending to route to/from Canaries, Madeira and mainland Portuguese and Spanish destinations via the Shanwick Oceanic Control Area (OCA) are usually requested to flight plan via published routes T9, T213 or T16. During the strike period, ATC normally won't let you cross from one Tango Route to another.
- **Tunisia** allow overflights without the need for an overflight permit.

- **Algeria** allow scheduled commercial flights to overfly its airspace without a permit, but all other flights must have one.
- For routes through Tunisia/Algeria, check the Mitigation Plan for the permitted routings. And make sure to add the right AFTN codes on flight plans! That means as well as filing your FPL to the normal Eurocontrol addresses, you must also include those for Algeria (DAAAZQZX) and Tunisia (DTTCZQZX and DTTCZRZX) – and make sure these are included for any subsequent DLA messages as well.
- **Shanwick** always publish something on the NOP telling us what entry points to use for NAT crossings. For westbound NAT crossings heading over the central Atlantic (rather than the NAT Tracks up north), they normally want us to file via OMOKO (or west of) or PASAS in order to best avoid all the extra traffic on the Tango routes. If you're entering the Shanwick OCA, you must have HF radio. And for oceanic clearance during the strike, you need to make sure you request your oceanic clearance 40 minutes before entry to the ocean.
