

Expanded Canadian ADIZ

OPSGROUP Team

24 May, 2018

As of May 24, Canada has expanded its ADIZ to include all its national territory in the Arctic Archipelago.

Requirements for operations in the ADIZ remain the same. You'll need a transponder with altitude reporting and a working two-way radio. Remember, you'll need to include the time and location of ADIZ border crossing in your flight plans RMK section.

Full AIC 2/18 for the detailed lat/long of the expanded area here.
