

Sudan Airspace Update: A New Risk

OPSGROUP Team

22 January, 2021

Generally, our SafeAirspace risk assessments focus on risk due to conflict, and the anti-aircraft weaponry that is often a result of said conflicts. But today a new risk alert popped up for **South Sudan**.

So this is a brief summary on the history of airspace safety concerns for Sudan and South Sudan, and the new risk that has been highlighted specifically for South Sudan.

Where are we talking about?

South Sudan is a landlocked country in East-Central Africa, bordered by Sudan, Ethiopia, the DRC, the CAR, Uganda and Kenya. The main airport for **South Sudan is HSSJ/Juba**.

So it's South Sudan, not just Sudan?

Yep, there are two Sudan's – Sudan and South Sudan. South Sudan is officially known as the Republic of South Sudan, whilst Sudan (North Sudan) is 'just' Sudan.

Sudan and South Sudan are two separate countries since 2011

Sudan's primary airport is HSSS/Khartoum

They were the same country until 2011 when they separated following decades of civil war. South Sudan became the world's newest nation.

Two separate Sudans, three separate issues

Following five years of civil war in South Sudan, a ceasefire has largely held since Sept 2018. Though there has been a significant reduction in violence since then, the political and security situation remains volatile.

Sudan, on the other hand, (which borders South Sudan, the Central African Republic and Chad), has had its own conflict. In 2019 they temporarily closed all their airspace following a military coup which ousted their longtime president Omar al-Bashir from power. This came after months of protests against his rule.

Clashes between the army and former security agents resulted in violence and gunfire in the streets, and the temporary closure of HSSS/Khartoum airport in 2020, but this was brought under control relatively quickly.

There are also issues in bordering Ethiopia and Eritrea, in the Tigray region, which resulted in the closure of some airspace and airways by the Ethiopian and Sudanese CAA.

What warnings are in place due to conflict?

South Sudan – Although the situation has improved since Sept 2018, several countries (the UK, France and Germany) still advise against overflying South Sudan below FL250/260 due to **the risk posed by anti-aircraft weaponry**. The US published a similar warning but rescinded it in Aug 2019.

Sudan – Only has one official warning in place, from the French authorities. This recommends against

overflights below FL260 in the far Southern and Western regions.

But there is a new warning for South Sudan?

Yes, there is. And it isn't conflict related.

ICAO released a letter on January 20th regarding the safety of Civil aircraft in the Khartoum FIR over South Sudan.

The raised '**grave concerns' for the safety of International air traffic operating below FL245**, and operating into and out of HSSJ/Juba international airport.

The concerns relate to the disruption of air traffic services and the lack of contingency arrangements in place. They warn about the lack of suitably qualified air traffic control personnel, the lack of information being shared on unserviceable or withdrawn navigation equipment, and inadequate air-ground communications.

Sir/Madam,

1. I have the honour to address you as the appropriate State Authority of aircraft operator(s), which may use the airspace under the authority of the Republic of South Sudan.
2. I draw your attention to the possible existence of serious risks to the safety of international civil flights operating within the Khartoum Flight Information Region (FIR) over the territory of South Sudan, below flight level (FL) 245, and arriving at or departing from Juba International Airport (HSSJ).
3. Information received by the International Civil Aviation Organization (ICAO) from a variety of sources indicates that there has been a disruption to air traffic services and related supporting services within the above-mentioned airspace without the benefit of adequate contingency arrangements being in place. Your attention is specifically drawn to the lack of suitably qualified air traffic control personnel, the non-promulgation of aeronautical information concerning out of service or withdrawn navigation equipment and the necessary mitigation arrangements, coordination irregularities with adjacent area control centres, and inadequate air-ground communications.
4. ICAO, therefore, holds grave concerns for the overall safety of international air traffic and, consequently, you are strongly urged to use this and any other pertinent information to assess flight safety risk in the airspace under the authority of South Sudan.
5. Please be assured that the primary objective of ICAO remains the safety and security of international civil aviation. ICAO continues to actively coordinate with the authorities concerned on matters, which could impact flight safety, and will notify you of any significant developments.

ICAO letter concerning South Sudan

A quick search on Notams for Khartoum FIR and Juba airport only brought up info on the opening of airspace following Covid restrictions.

The full warning from ICAO can be read [here](#).

In summary

- Both Sudan and South Sudan are considered **Level 2: Danger Exists regions** because of ongoing conflicts.

- South Sudan now poses a **separate risk due lack of aviation infrastructure** and lack of information being promulgated (through Notams) on this.
 - **Caution recommended** if operating below FL245 in South Sudanese airspace, or if you are operating into HSSJ/Juba airport.
-

Sudan “will shoot down” aircraft

Declan Selleck
22 January, 2021

In May 2016, Sudanese radar detected several unauthorised flights by Aid Agencies using chartered IL76 aircraft. The response from the government, on this occasion the Sudanese Army, was extremely strong.

We are concerned at the language being used in Khartoum and Juba. The most recent statement from the Sudanese Army, on 2nd June 2016, says “This action is considered a serious violation of the aviation regulations and the international laws, so we consider it as a direct affront to the Sudanese sovereignty ... [we] will deal decisively with any plane failing to observe the proper procedures and entering the Sudanese airspace without prior permission”.

At the start of this year, the South Sudan government declared: “The South Sudanese government has ordered its army to **shoot down any aircraft** flying across its airspace without permission, citing the increase of unauthorised incursions into the national airspace”.

It’s tempting to dismiss this as not related to regular airline or non-scheduled flying – including long haul overflights – but we’ve learned lessons in the last few years that the unexpected isn’t as distant a threat as it used to be.
