

# Almaty airport open again following civil unrest

OPSGROUP Team  
14 January, 2022

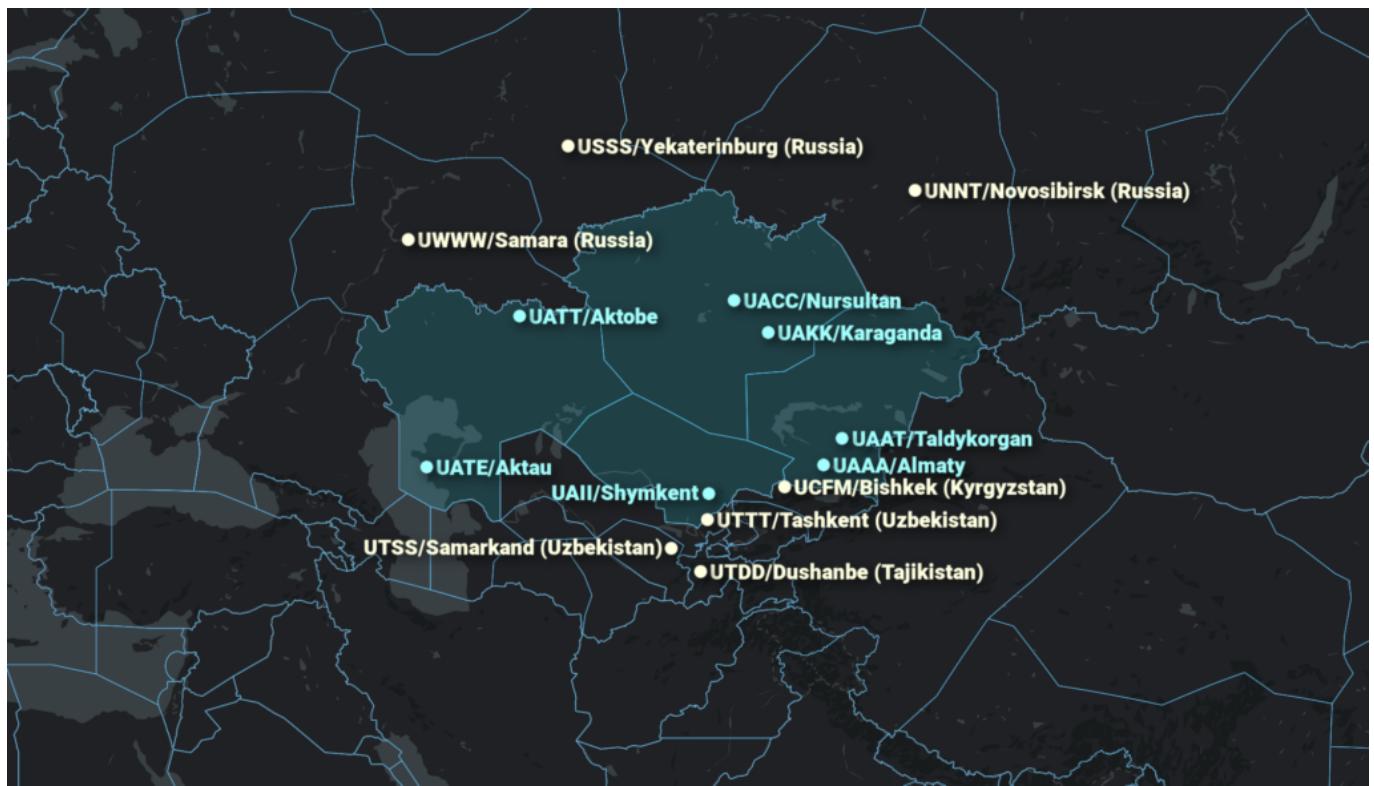

**\*\*Update, Jan 14 - 12:00z\*\***

- **UAAA/Almaty airport has reopened** following the recent riots. But the a state of emergency will remain in place until at least Jan 19 - carefully consider security if planning crew overnights here. Until Jan 19, the airport is only open between 0800-2100 local (0200-1500z), as per Notam A0032/22.
- **Report from OPSGROUP member on the ground:** *"We have been in Almaty since Jan 12th. The city is safe with no security issues at his time. Restaurants and hotels are open. Internet and cell service is back to normal as well. Fuel may still be an issue as Kazakhstan was experiencing Jet Fuel shortages before the riots. Check with your handler before landing to confirm uplift."*

**\*\*Update, Jan 12 - 12:00z\*\***

- Police and military report that civil unrest has been brought under control, including in the city Almaty.
- Troops from Russia and other countries have secured **UAAA/Almaty airport**. Kazakh government authorities issued a statement on Jan 12 saying that the airport will **resume operations on January 13**. *"Starting January 13, 2022, the international airport of Almaty will resume operation. According to the preliminary information provided by the airport's management, domestic and international flights will be performed from 8:00 am (5:00 am Moscow time) to 9:00 pm (6:00 pm Moscow time),"* the report said.
- Other Kazakhstan airports remain open and operational. **UACC/Nursultan airport** is open

with several scheduled services operating in. A flight dispatch report suggests the airport is secure but telephone contact may be difficult if contacting from abroad.

UAAA/Almaty airport had been closed since Jan 2, following mass riots in many cities across the country. Thousands of people were injured, and the number of casualties remains unknown. On Jan 5, the President declared a state of emergency until at least Jan 19. There were also curfews put in place across Almaty city, from 8pm to 7am. The US Embassy raised the Travel Advisory for Kazakhstan recently to reflect level 4, "Do Not Travel" due to civil unrest.

## Overflights

No Notams have been issued indicating that overflights are affected. Keep a close eye on things if operating in the region. It may also be worth familiarising yourself with TIBA contingency procedures.

## One other thing: Fuel

We have previously reported on rumours of fuel issues across Kazakhstan - particularly for GA flights operating to **UAAA/Almaty, UACC/Nur-Sultan and UAKK/Karaganda**. Initially agents at airports advised this was not the case, but later informed us that fuel was only available to airline flights and locally registered charter operators. Foreign registered non-scheduled flights would be unable to uplift fuel. The official word is that you need prior permission from airport authorities to take any on.

---

# Kazakhstan: Improving Safety

Kazakhstan have been working with the UK CAA and ICAO to **improve their safety and compliance**, and they've done well. ICAO's recent audit of them, in August, noted an 84% effective implementation of ICAO standards and recommended practices.

So, what does this mean for you practically if you are operating into Kazakhstan?

### **Some background info for you**

Before all this, they were not doing so well.

The previous audit carried out in 2016 had them scoring pretty poorly on a bunch of areas, most noticeably their **Civil Aviation Organisation** was lacking and their **Accident Investigation** skills were poor, both scoring less than 50%. The operational impact of this was safety – a lack of information to operators and crew, and a lack of regulation and oversight.

**Their Aerodromes and Radio Aids** also fell short, scoring 60%. Which probably meant you would often see Notams advising of unserviceability, and potentially reduced approach or low visibility capabilities at airports, amongst other things.

### **And now?**

Now they are 15% higher than the global average.

To improve their audit rankings they have done things like implement:

- better operational regulations
- improved oversight from the authority
- better trained technical personnel

### **Tell us what we need to know operationally**

The new (and improved) Aviation Administration of Kazakhstan have **implemented legislation which aligns with EASA/EU legislation**. Their new regulator is bringing better technical control and is improving safety levels across the country to be more in line with international requirements.

This means **big changes to basic aviation law**, including 61 new by-laws and a bunch of legal acts. But if you operate into Kazakhstan, don't stress – this won't mean huge changes and new laws for you to learn – since they now are aligned with ICAO SARPs and EASA legislation it should be fairly familiar.

### **Airport names are changing**

In June 2020, **UACC/Nursultan Nazarbayev** International Airport amended its **IATA code from TSE to NQZ** – the former code being one harking back to the old Soviet Union days when the capital city was called Tselinograd.

There are 25 certified airports in the country, including 18 international ones (although there are 9 main ones you would probably be interested in.) The point is – other airports may well follow suit and update their names and codes, so double check those IATA codes carefully.

### **They are implementing GRF**

The new ICAO Global Reporting Format will be implemented meaning pilots should receive better contamination reports and standardised Snowtam info.

### **How else is safety improving?**

They have done a big review of risks at airports. They've listed the problems, the risk scores, their targets and the trend for improvement.

**The biggest problems** seemed to lie in:

- Wildlife and habitat management seemed to be a big issue at some of the airports
- De-icing procedures, facilities and equipment was another high scoring risk
- Ground ops resulting in potential collisions, and FOD on the runway
- Contaminated fuel and general fuel and handling services

And all these are improving across the major airports.

### **I think I would like to head there now?**

Great, well you are going to need an **overflight permit or a landing permit**, depending on what you want to do. They are easy to get direct from the authority.

Technically, the overflight permit requirement doesn't apply anymore, but it is easier if you do get one because they want all navigation fees paid in advance or they won't let you into the FIRs.

You can use **AFTN: UAAKQFNS / +7 7172 704 345 / caf@ans.kz**

### **Any recommendations on where to go?**

The main airports used for **Tech Stops** (if overflying) are:

- **UAAA/Almaty** Open H24 with a 14,764' / 4500m and 14,436' / 4400m runways with CAT III approaches
- **UACC/Nur Sultan (Astana)** H24 (but restricted) 11,483' / 3500m runway with CAT III approach capability

Both airports apparently have Jet A1 fuel, although you might find TS-1 at other airports (the Russian "Jet A1" with a -50°C freezing point).

You also have some decent ones in neighbouring countries:

- UBBB/Baku
- UTTT/Tashkent
- UTAA/Ashgabat
